Mandarin-sEEG Restricted Data Use Agreement

Dataset: A multi-subject Stereotactic EEG dataset for Mandarin speech production and decoding

Data provider: Westlake University and Zhejiang University School of Medicine Affiliated Hospitals

Access-request contact: yangjie@westlake.edu.cn

The following Data Use Terms must be signed, submitted, and approved before an investigator may receive access to Restricted Data from the Mandarin-sEEG dataset. The Dataset contains human stereotactic electroencephalography (sEEG) recordings and speech-related recordings. Speech audio and combinations of neurophysiological, electrode, linguistic, and clinical information may contain potentially identifying information. These additional precautions are therefore required to protect participants and to maintain the ethical and legal governance of the Dataset. This Agreement applies to the individual applicant and to the applicant's supervising Principal Investigator (PI), Institution, and approved research team. The application will be approved by the Dataset Access Committee or designated data custodian before data are released.

A. Definitions of Restricted Data Elements

The following data elements are covered by this Agreement when supplied under a controlled-access application:

No.	Restricted data element	Description
1	sEEG data	Raw or minimally processed intracranial recordings, channel-level data, trial-level signal segments, and associated signal derivatives.
2	Speech and audio data	Raw or minimally processed speech recordings, audio-derived features, and other materials that may preserve voice identity or speech content.
3	Annotations and task records	Trial-level timing, phonetic, tonal, word, sentence, behavioral, and task annotations.
4	Electrode and anatomical information	Electrode labels, localization coordinates, implantation information, channel metadata, and related anatomical or clinical information.

5	Participant and session metadata	Coded demographic, clinical, recording-session, and acquisition information that is not explicitly designated as openly available.

B. Who Can Obtain Access

Investigators are expected to meet one of the following criteria:

1. The applicant is a PI or independent investigator conducting scientific research at a university, hospital, research institute, government agency, or other organization able to provide appropriate research and data-security oversight; or
2. The applicant is a student, postdoctoral researcher, staff scientist, or other trainee working under the supervision of a PI who is named in the application; or
3. The applicant can provide equivalent evidence of a legitimate scientific purpose, appropriate institutional oversight, and adequate technical safeguards, subject to approval by the Dataset Access Committee.

The proposed work must be consistent with participant consent, applicable ethics requirements, and the stated purpose of the access application. The Dataset is intended for non-commercial scientific research, method development, or education.

C. Investigator Obligations

I request access to Restricted Data from the Mandarin-sEEG dataset. I understand that these terms supplement the repository's general data-access conditions and that I must comply with the following obligations.

No.	Data use term	Applicant initials
1	**Applicant status.** I am a PI or independent investigator as described in Section B.1, or I am applying under the supervision of the PI named below. If I am not a PI, I understand that my PI must review and approve this application and that I may not access the Dataset until my individual access has been approved. Name of supervising PI:_____	
2	**Approved purpose.** I will use the Restricted Data only for the scientific, methodological, or educational purpose, data categories, users, and access period described in my approved application. I will not use the Dataset for clinical diagnosis, treatment decisions, employment or insurance decisions, law-enforcement decisions, or other purposes outside the approved scope.	
3	**No re-identification.** I will not attempt to identify or re-identify any participant, patient, family member, clinician, or other person	

	represented in the Dataset. This includes attempts based on voice characteristics, speech content, electrode locations, clinical information, timestamps, or combinations of Dataset elements.	
4	**No data linkage.** I will not link the Dataset with another dataset, registry, database, public source, or private record when the linkage could increase the risk of participant or session identification.	
5	**No redistribution.** I will not copy, redistribute, sell, publish, or provide Restricted Data to any other person or organization. I will not share data with members of my team unless they have independently submitted the required information, signed the applicable terms, and received approval as Authorized Users.	
6	**Data security.** I will store the Restricted Data on an institutionally managed, password-protected system with access limited to Authorized Users. I will use encryption at rest and during transfer whenever technically feasible and required by institutional policy. I will not store the data on an unsecured personal computer, removable drive, public file-sharing service, or unapproved cloud platform.	
7	**Third-party services.** I will not upload Restricted Data to a public repository, public code platform, general-purpose generative-AI service, or other third-party service without prior written approval from the Provider and appropriate institutional security review.	
8	**Ethics and institutional compliance.** I will comply with all applicable laws, regulations, institutional policies, information-security requirements, and ethics or human-subjects review requirements. I will obtain any required ethics approval, exemption, institutional determination, or other authorization before using the Dataset.	
9	**Citation and acknowledgement.** Any paper, thesis, presentation, software release, or other public report using the Dataset will cite the Dataset descriptor and acknowledge the participants, clinical teams, data collectors, curators, providers, and applicable funding sources. I will replace the temporary citation below with the final Data Descriptor citation when it becomes available.	
10	**Data limitations.** I understand that the Dataset is provided for research use on an "AS IS" basis and is not validated or authorized for clinical diagnosis or treatment. To the extent permitted by applicable law, the Provider makes no warranty regarding completeness, accuracy, fitness for a particular purpose, uninterrupted availability, or clinical suitability.	

Application Information (required for all applicants):

The following information is required for every applicant. Each person who will access

Restricted Data must submit an individual application, even when working in the same research group.

Field	**Applicant response**
Full name	
Appointment or title (e.g. Professor, Postdoc)	
Institutional affiliation	
Email address	
Telephone number	

For PIs only: Names of non-PI applicants in your group who have applied or will be applying for access. All users of the Data MUST apply independently for access.

_____

_____

Applicant Signature: _____

Date: _____

Note: Applications should be submitted as a signed PDF to yangjie@westlake.edu.cn. Access will not be enabled until the application has been approved and all required signatures have been received.
